

Humus Compost

Increases Profits

I have been applying Humus Compost to 1,000 acres of my crop land for the past 5 years. In that time I have been able to eliminate all of my P and K fertilizer and reduced my N to 80 lbs./acre in corn. Over that same 5 years my corn yields have increased 10% over my 5 year running average. The contribution of reduced fertilizer costs and increased yields have pleasantly improved my bottom line over \$100 per acre, making me as well as my banker very happy.

Humus Compost provides an additional measure of “Crop Insurance”

I have been a no-till farmer for over 20 years and a Humus Compost user for the last 5 years. I have noticed that Humus Compost not only increases soil structure but helps the soil manage water. I have less standing water after a heavy rain and more moisture retained in the soil. In this picture I am digging into soil that has not been tilled for over 20 years with my fingers and found moisture just below the surface even though it had not rained for 45 days.
